

Table in HTML

In HTML, table-related elements are used to create and format tables. Below is a table of all HTML table elements and their attributes:

HTML Element	Description	Attributes
<table>	Represents the table itself.	border, cellpadding, cellspacing, summary, align, bgcolor, width, height
<caption>	Defines a table caption, which is displayed above or below the table.	align (deprecated, specifies the alignment of the caption)
<thead>	Groups the header content in a table.	-
<tbody>	Groups the body content in a table.	-
<tfoot>	Groups the footer content in a table.	-
<tr>	Defines a row in a table.	align, bgcolor, valign
<th>	Defines a header cell in a table. Typically bold and centered.	colspan, rowspan, headers, scope, abbr, sorted, align, bgcolor, valign
<td>	Defines a standard data cell in a table.	colspan, rowspan, headers, align, bgcolor, valign, nowrap, width, height
<col>	Specifies column properties for each column in a <colgroup>. Used for styling columns.	span, align, char, charoff, valign, width
<colgroup>	Groups one or more columns in a table for formatting.	span, align, char, charoff, valign, width

Table-Specific Attributes Explained:

- **border**: Specifies if the table has borders (e.g., border="1").
- **cellpadding**: Defines the space between the cell content and cell border.
- **cellspacing**: Defines the space between cells in a table.
- **summary**: Provides a summary of the table's content and structure (deprecated).
- **align**: Aligns the content of the element (deprecated for some elements in HTML5).
- **bgcolor**: Specifies the background color of the table or individual elements.

- **width** and **height**: Specifies the width and height of the table or cells.
- **colspan**: Specifies how many columns a cell should span.
- **rowspan**: Specifies how many rows a cell should span.
- **headers**: Associates a data cell with header cells.
- **scope**: Defines whether a header cell applies to a row, column, or group.
- **abbr**: Provides an abbreviated version of the content in a header cell.
- **valign**: Specifies vertical alignment of cell content.
- **nowrap**: Prevents wrapping of text within a cell.
- **sorted**: Defines sorting direction of a column in a <th> (HTML5).
- **span**: Specifies the number of columns affected by <col> or <colgroup>.

This table provides a comprehensive look at the elements used in HTML for constructing tables and their attributes.
